

```
+++++
Hosting Static Website using HTTPD Server
+++++
```

```
$ sudo yum update -y
```

```
$ sudo yum install httpd
```

```
$ sudo systemctl start httpd
```

=> Then access EC2 VM public IP in browser

Note: We need to enable HTTP : 80 port in Security group

=> To customize website content we can create "index.html" in "/var/www/html" directory

```
$ cd /var/www/html
```

```
$ sudo vi index.html
```

```
<h1> Welcome to Ashok IT</h1>
<h2> Leading Software Training Institute in Hyderabad</h2>
<h3>Contact Us: +91-9985396677</h3>
```

Note: Save and close the file

=> When we refresh our browser it will display our content in web page

```
+++++
What is User Data in EC2 ?
+++++
```

-> User Data is used to execute the script when EC2 instance launched for first time

-> We can say User Data is a default script to execute when EC2 instance launched

Note: When we stop and start our EC2 then User Data will not execute

```
#!/bin/bash
sudo su
yum install httpd -y
cd /var/www/html
echo "<html><h1>Welcome to Ashok IT</h1></html>" > index.html
service httpd start
```
